

# TOR-MASTER

## NEW TRASH CUTTER

*The Tor-Master Trash Cutter is designed for less tillage, especially in corn stalks. One pass will cut up the stalks and root system into small particles of straw.*

## FEATURES

Comes in sizes 31.5', 25.5', 22.5' and 16.5'

20" blades with 3" spacing  
Enough residue will be left with no soil erosion and a good seed bed

Back has 2 rows of tumblers which are mounted on double rubber mounts

Blades are at a slight spiral angle which makes them more aggressive with sharp edges for moving the soil at a slight angle which cuts the straw 2 more times and levels out the land

2 disks on 1 castor mount with a cavity in between.

Another cavity with a double lip seal on the outside of the bearing for longer life span. They require less greasing and loss of grease on the land

The down pressure on the blade is with hydraulic cylinders and accumulators which controls for uniform pressure at all times
